Specialist Polyurethane Flooring Systems

www.resdev.com

♣Pumadur®

Resdev's Pumadur range of high performance polyurethane flooring is designed to exceed the ever changing needs of both the industrial and commercial markets for seamless, hygienic flooring.

In an extensive colour choice encompassing specific requirements including strength, slip and chemical resistance, Pumadur Polyurethane Flooring Systems provide the ideal solution.

From coatings and coving products through to flow applied and heavy duty systems incorporating specialised graded aggregate and fillers, Resdev can provide strong flooring solutions for practical and prestigious installations alike.

Typical Installations are:

- Chemical Processing & Storage
- Food Processing & Manufacture
- Pharmaceutical
- Healthcare
- Cold Storage/Freezers
- Breweries
- Printing
- Heavy Duty Traffic, Plant Vehicle Areas
- Engineering Process Areas
- Production & Warehousing
- Showrooms
- Toilets and Washroom Areas
- Food Preparation Areas
- Laboratories
- Dairy Clean Areas
- Storage Areas
- Plant Rooms
- General Engineering
- Dust-Proofing
- Line Marking/Safety Signage

♣Pumadur® Heavy Duty Polyurethane Flooring

Pumadur HF/Pumadur RT

The **Pumadur** range of heavy duty polyurethane flooring systems from Resdev are manufactured to comply with the exacting specification for a seamless surface designed to provide excellent resistance to abrasion, chemical attack and other forms of physical aggression including thermal shock from excessive heat up to 120°C.

Pumadur HF and **Pumadur RT** water-dispersed heavy duty polyurethane floor systems, with graded silica aggregates give a lightly textured profile and matt surface.

Pumadur RT may be used without a primer on substrates with low porosity as it is resin-rich to enable absorption into the sub-floor.

Pumadur HF and **Pumadur RT** can also withstand the rigours of pressure washing and steam cleaning at a thickness of 9 mm.

Some colours in some systems can be affected by UV light over time. Non standard colours are available on request. The colours shown may differ from the original product due to reprographic and technological media variations. The same colour in different products may also vary due to the composition and texture of the final finish. If colour and final aesthetics are of concern, please contact us to request an actual sample of the colour and system required.

♣Pumadur® Flow Applied Flooring

Pumadur MD/Pumadur SL

Resdev's medium duty flow-applied systems are smooth, and attractive as well as offering excellent wear resistance, good cleanability and abrasion qualities.

Pumadur MD is a flow applied system based upon polyurethane technology with a high order of durability, resistance to abrasion, impact, chemical attack and penetration. Its smooth matt finish is the ideal partner for the rigours of heavy duty environments.

Pumadur SL is a durable self-levelling polyurethane flooring system ensuring a smooth matt finish with excellent resistances to abrasion and chemical attack.

Some colors in some systems can be affected by UV light over time. Non standard colors are available on request. The colors shown may differ from the original product due to reprographic and technological media variations. The same color in different products may also vary due to the composition and texture of the final finish. If color and final aesthetics are of concern, please contact us to request an actual sample of the color and system required.

♣Pumadur® Coating, Coving & Wall Render

Pumadur TF/Pumadur CG/ **Pumadur WR**

Resdev's fully comprehensive range of high performance, polyurethane coating, coving and wall renders are recommended for use in a broad selection of environments.

Pumadur TF is a solvent free high build coating, giving high quality levels of resistance to abrasion, chemical attack and other forms of physical aggression. It is available in a selection of matt colours.

Pumadur CG coving grade and Pumadur WR coving/wall render are designed specifically for use with Pumadur Polyurethane Flooring Systems in order to maintain the same standards of resistance to abrasion and chemical contact when used in conjunction with Pumadur TF. This will give a totally seamless 'box' finish floor and wall system for high hygiene sterile process, bund and tanked areas.

Some colours in some systems can be affected by UV light over time. Non standard colours are available on request. The colours shown may differ from the original product due to reprographic and technological media variations. The same colour in different products may also vary due to the composition and texture of the final finish. If colour and final aesthetics are of concern, please contact us to request an actual sample of the colour and system required.

A Results obtained in a controlled laboratory environment

The durability slip & chemical resistance of a Pumadur Polyurethane Flooring System is directly proportional to the thickness applied and other factors including traffic, mechanical and chemical use, impact damage and housekeeping practices. Protection is offered against a comprehensive range of chemicals though some highly aggressive chemicals may not be suitable in higher percentage strengths.

Durability

LD (Light Duty) - Light foot traffic, occasional rubber tyred vehicles.

MD (Medium Duty) - Regular floor traffic, frequent fork lift truck traffic, occasional hard plastic-wheeled trolleys.

HD (Heavy Duty) - Constant fork lift truck traffic, Hard plastic wheeled trolleys, some impact.

VHD (Very Heavy Duty) - Severe heavily loaded traffic and impact.

^{*} Occasional not consistent exposure

The Pumadur range of polyurethane flooring systems can be applied to a wide variety of substrates including concrete and grano concrete and is resistant to chemical attack including:

- organic and inorganic acids
- alkalis
- fuel
- hydraulic oil
- aromatic and aliphatic solvents
- other forms of physical aggression

Resdev is a full manufacturer member of FeRFA, The Resin Flooring Association and the product types are given in accordance with BS 8204 Part 6 and comply with the standards set by the association. Products are categorised into 8 types to represent a class of properties and durability of flooring finish. The different types are appropriate for use in different applications to ensure the best solution every time.

The technical and specification data provided is given as a guide and additional specification and materials safety data is available upon request, further assisted by Resdev's Technical Support Team giving direct access to specialist advice. Working closely with specialist approved flooring contractors our aim is to ensure that each customer is completely satisfied at every stage of the project, interacting with all parties involved to select and install correctly specified floor systems, and including an established after-sales support structure which is second to none.
